

Anonymous. Codeless. Seamless.

Effortlessly attain compliance with data privacy regulations by leveraging Privly's comprehensive platform. Our solution seamlessly enables the anonymization of personally identifiable information (PII) into critical operational processes, encompassing Data Aggregation, Data Pipeline, Data Workflow, and Data Governance. This strategic integration ensures that your organization adheres to data privacy regulations with ease while ensuring protection of PII in a trustworthy data managed environment.

More reasons to protect your enterprise data with Privly

Extract data from sensitive datasets without fear.

Rest easy knowing that you can handle, process, and share your company's heavily regulated data assets.

Share anonymized data internally and externally.

Because all sensitive data is anonymized, you can collaborate more freely with internal and external colleagues.

Comply with data privacy obligations globally.

When personal identifiable information is anonymized, datasets typically overcome regulatory issues.

Eliminate risk of personal data breaches

When Privly anonymizes personal data profiles, the original database is never exposed, remains untouched.

Privly. Data Privacy Delivered.

Comply with data privacy obligations globally.

Extract data from sensitive datasets without fear.

Keep original data untouched and locked.

Privly's Anonymization Capabilities

Privly offers both masking and redaction options for personal identifiable information. Masking replaces data profiles with structured fictitious information, while redaction eliminates selected data profiles.

Our innovative Poly-Anonymization™ method replaces details like names, addresses, and mobile numbers with unique, unpredictable Poly-Anonymous Identifiers (Poly-IDs), preserving their distinctiveness without hashing.

By assigning a Poly-ID to each anonymized datapoint, Privly enables users to seamlessly merge datasets without revealing personal identifiable information, facilitating individual-level record matching.

How Privly works in 3 simple steps

1. Auto-Discover

2. Auto-Configure

3. Auto-Generate

Privly Use Cases

- Testing
- Cloud Migration
- Analytics & AI/ML
- Data Sharing
- Data Masking
- Dashboards
- SaaS
- 3rd Party Anonymous Matching
- Selective Re-Identification
